

OUTPATIENT VALUE ASSESSMENT

Community Health

130 providers · 198,000 encounters · Outpatient

PREPARED BY

Julia Sonis · February 12, 2026

THE THESIS

130 providers · 198,000 encounters · Outpatient

PROJECTED NET ANNUAL VALUE

\$69K

If we give providers time back, what happens to your practice?

130 providers	198,000 encounters	70% utilization	\$264K investment
------------------	-----------------------	--------------------	----------------------

TWO SOURCES OF VALUE

Ambient documentation creates value in two distinct ways: by returning time to providers (which translates to capacity, cost reduction, and retention) and by improving documentation quality (which captures revenue that already exists but isn't being coded).

TIME RECAPTURED

\$116K

Hours returned to patient care, capacity expansion, and operational efficiency.
The constraint is time.

REVENUE OPTIMIZED

\$100K

wRVU capture, HCC recapture, and denial prevention through documentation quality.
The notes drive the revenue.

STRATEGIC OBSERVATION

Your value model is 70% time-driven. This indicates significant documentation burden—providers are spending substantial time that could be redirected to patient care and capacity.

YOUR VALUE DRIVERS

How Time Becomes Value

4,620 hours returned to your providers. Here's how each driver works.

TIME RECAPTURED

Patient Access

\$116K

4,620 hrs × 10% toward capacity = 462 hrs

462 hrs × (60/30 min) = 924 visits

924 × \$125/visit = \$116K/year

TIME RECAPTURED Subtotal

\$116K

REVENUE OPTIMIZED

Denial Prevention

\$100K

138,600 enc × 8% denial rate

× 30% doc-related × 25% prevented

× \$200/claim = \$100K/year

REVENUE OPTIMIZED Subtotal

\$100K

PROJECTED ANNUAL VALUE

\$69K

Per provider: ~\$528/year

THE INVESTMENT CASE

Infrastructure, Not Expense

Investment stays flat while value grows. This is the signature of infrastructure—fixed cost, scaling returns.

3-YEAR PROJECTION

PERIOD	VALUE	INVESTMENT	NET VALUE	CUMULATIVE
Year 1	\$69K	\$264K	\$-195K	\$-195K
Year 2	\$76K	\$264K	\$-188K	\$-383K
Year 3	\$83K	\$264K	\$-181K	\$-564K

By Year 3, you're generating 0.3× for every \$1 invested. That's not a line item to cut in a downturn—it's infrastructure to protect.

AT SCALE

Per-provider economics remain consistent at scale.

CURRENT MODEL

\$69K/yr

130 providers
70% utilization
Per provider: ~\$528/yr

AT FULL SCALE

\$78K/yr

130 providers
80% utilization
Per provider: ~\$604/yr

KEY METRICS TO TRACK

- 1. Documentation time per encounter (target: -50%)
- 2. Provider satisfaction score (target: +15 pts)
- 3. wRVU per encounter trend (target: +2-5%)

YOUR ASSESSMENT

130 providers.

198,000 encounters.

\$69K projected net value.

\$528 per provider per year.

Give providers their time back—and the documentation gets better, not worse. That's the counterintuitive truth about ambient documentation. Better notes come from less time documenting.

AT A GLANCE

VALUE SUMMARY

TIME RECAPTURED	\$116K
Patient Access	\$116K
REVENUE OPTIMIZED	\$100K
Denial Prevention	\$100K

Net Annual Value	\$69K
------------------	-------

INVESTMENT SUMMARY

Annual Investment	\$264K
Per provider	\$2K
Year 1 ROI	1.3×
Year 3 Cumulative	\$-564K

UTILIZATION

Projected	70%
Hours Returned	4,620
Per provider/week	0.7 hrs

METHODOLOGY

YOUR INPUTS

130 providers
198,000 encounters
70% utilization
2 min saved
\$264K investment
4,620 hrs returned

REALIZATION RATES

Denial Prevention: 60%
Conservative by design.
Based on observed
implementations.

This assessment is for planning purposes. Realization rates are conservative and based on observed implementations. The goal is a framework for decisions, not a prediction. Validate with your organization's data post-implementation.
