

UNDERSTANDING VALUE REALIZATION

Ambient AI creates value through four dimensions: how many encounters use it (utilization), how much time it saves (efficiency), how it improves documentation quality (wRVU lift), and whether providers will keep using it (satisfaction).

Most organizations capture only 30-60% of the potential value. The gap isn't because ambient AI doesn't work — it's because value realization requires optimization across all four dimensions. Small gaps in each area compound into significant unrealized value.

YOUR RESULTS AT A GLANCE

Of potential value being captured today

\$208K

3-Year Gap

Cumulative gap over three years

Optimized

Stage

Where you are on the maturity spectrum

OUR FINDINGS

At 69% value realization, your organization is performing above average. You're capturing meaningful value from ambient AI, but there's still a gap of \$69K annually that represents optimization opportunity.

Primary Opportunity

Your data shows Quality as your biggest gap (40% of benchmark), while Satisfaction is your relative strength (82%). This suggests targeted intervention on Quality could yield disproportionate returns without disrupting what's already working.

What's at Stake

The risk at this stage is complacency. "Good enough" can become the enemy of excellent. Organizations that push from Optimized to Transformed often see the highest ROI on their optimization efforts because the foundation is already strong.

DIMENSION	YOU	BENCHMARK	% OF BENCHMARK
Utilization	60%	75%	80%
Efficiency	3 min	4 min	75%
Quality (wRVU)	+2%	+5%	40%
Satisfaction	70%	85%	82%

THE VALUE REALIZATION SPECTRUM

Organizations move through four stages as they optimize ambient AI:

EARLY STAGE

Under 40%

DEVELOPING

40-60%

OPTIMIZED

60-80%

TRANSFORMED

80%+

YOU: 69%

At 69% realization, you're in the "Optimized" stage. The gap between where you are and where you could be represents \$69K annually in unrealized value.

YOUR PERFORMANCE ACROSS FOUR DIMENSIONS

Value realization depends on performance in four areas. Here's where you stand compared to Abridge benchmarks:

UTILIZATION

80% of benchmark

What it measures: The percentage of patient encounters where ambient AI is actually used to generate documentation.

You: 60%

Benchmark: 75%

Why it matters: Every encounter not using ambient AI is an encounter where providers still carry the full documentation burden. Low utilization means you're paying for a solution that isn't being used consistently.

What drives it: Workflow integration, provider habits, technical friction (login issues, connectivity), specialty fit, and whether using the tool feels natural in the clinical environment.

EFFICIENCY

75% of benchmark

What it measures: The average time saved per encounter when ambient AI is used — typically measured as reduction in documentation time.

You: 3 min

Benchmark: 4 min

Why it matters: This is the core promise of ambient AI: giving time back to providers. Less time saved per encounter means the documentation burden persists, even when the tool is being used.

What drives it: Note quality out of the box, how much providers edit generated notes, specialty-specific templates, EHR integration smoothness, and whether the AI captures the encounter accurately the first time.

QUALITY (wRVU LIFT)

40% of benchmark

What it measures: The improvement in documentation completeness and coding accuracy, measured through wRVU capture — a proxy for whether documentation supports appropriate reimbursement.

You: +2%**Benchmark: +5%**

Why it matters: Better documentation leads to better coding, which leads to better reimbursement. This is often the largest dollar opportunity in ambient AI — small improvements in coding accuracy compound across thousands of encounters.

What drives it: How completely the AI captures clinical details, whether it prompts for missing elements, coder feedback loops, and whether documentation supports the complexity of care actually delivered.

Your situation: At 40% of benchmark, documentation quality improvement is lagging. This could be the largest dollar opportunity — review whether notes are capturing clinical complexity that supports accurate coding.

SATISFACTION

82% of benchmark

What it measures: Provider satisfaction with the ambient AI solution — typically measured through surveys asking whether they would recommend it to colleagues.

You: 70%**Benchmark: 85%**

Why it matters: Satisfaction is a leading indicator. Dissatisfied providers use solutions less over time, creating a downward spiral. Happy providers become champions who drive adoption among peers.

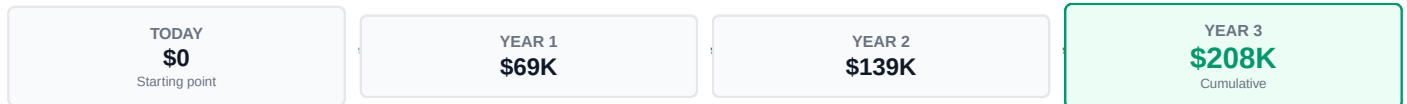

What drives it: Accuracy of generated notes, time actually saved, reliability, ease of use, and whether it makes their day genuinely better vs. adding another thing to manage.

Your average score: $(80\% + 75\% + 40\% + 82\%) \div 4 = 69\%$

Why gaps compound: The four dimensions don't add — they multiply. A 60% score in one dimension limits the value you can capture from improvements in others.

THE COST OF THE GAP OVER TIME

If the gap persists, unrealized value accumulates:

Every month at current performance = \$6K in unrealized value

HOW EACH GAP IS CALCULATED

Every number in this assessment can be traced back to your inputs and transparent assumptions. Here's the math:

UTILIZATION GAP		\$14K
Your utilization: 60%	Benchmark: 75%	Gap: 15pp
Step 1: Encounters at benchmark: 60,000 × 75% = 45,000		
Step 2: Encounters at your rate: 60,000 × 60% = 36,000		
Step 3: Gap × time savings: 9,000 enc × 4 min = 600 hours		
Step 4: Dollar value: 600 hrs × \$150/hr × 15% = \$14K		
EFFICIENCY GAP		\$23K
Your efficiency: 3 min	Benchmark: 4 min	Gap: 1 min
Step 1: Additional hours possible: 45,000 enc × 1 min ÷ 60 = 750 hours		
Step 2: Dollar value: 750 hrs × \$150/hr × 20% = \$23K		
QUALITY GAP (WRVU)		\$33K
Your wRVU lift: +2%	Benchmark: +5%	Gap: 3%
Step 1: Additional wRVU: 45,000 enc × 1.5 avg wRVU × 3% = 2,025 wRVU		
Step 2: Dollar value: 2,025 wRVU × \$33/wRVU × 50% = \$33K		
TOTAL ANNUAL GAP		\$69K
Utilization (\$14K) + Efficiency (\$23K) + Quality (\$33K)		

KEY TAKEAWAYS

- You're capturing 69% of ambient AI's potential value
- The largest opportunity is in Quality (40% of benchmark)
- Closing the gap could recover \$69K annually / \$208K over 3 years
- All calculations use conservative assumptions — actual value may be higher

RECOMMENDED NEXT STEPS		Focus: Documentation & Revenue
At 40% of benchmark, documentation improvements aren't translating to coding accuracy. This is often the largest dollar opportunity.		
Quick Wins (This Week)	Deeper Dives (This Month)	
• Connect with coding team to get feedback on AI-generated notes	• Establish coder feedback loop to AI-generated documentation	
• Review HCC capture rates before vs. after ambient AI	• Analyze wRVU patterns by provider to identify coaching opportunities	
• Identify specialties with largest documentation complexity gaps	• Review whether notes capture clinical complexity that supports billing	

METHODOLOGY & ASSUMPTIONS

YOUR INPUTS

- 50 providers
- 60,000 annual encounters
- 60% utilization
- 3 min time savings
- +2% wRVU lift
- 70% satisfaction

ABRIDGE BENCHMARKS

- 75% utilization
- 4 min saved per encounter
- +5% wRVU lift
- 85% satisfaction

VALUATION ASSUMPTIONS

- Provider time: \$150/hr
- Utilization conversion: 15%
- Efficiency conversion: 20%
- wRVU: \$33 (Medicare CF)

Benchmarks based on aggregate data from 200+ health system partners. Individual results vary based on specialty mix and operational factors.
