

OUTPATIENT VALUE ASSESSMENT

The Pitt

50 providers · 150,000 encounters · Outpatient

PREPARED BY

Brad Larmie · February 9, 2026

THE THESIS

50 providers · 150,000 encounters · Outpatient

PROJECTED NET ANNUAL VALUE

\$409K

If we give providers time back, what happens to your practice?

TWO SOURCES OF VALUE

Ambient documentation creates value in two distinct ways: by returning time to providers (which translates to capacity, cost reduction, and retention) and by improving documentation quality (which captures revenue that already exists but isn't being coded).

TIME RECAPTURED

\$364K

Hours returned to patient care, capacity expansion, and operational efficiency.

The constraint is time.

REVENUE OPTIMIZED

\$195K

wRVU capture, HCC recapture, and denial prevention through documentation quality.

The notes drive the revenue.

STRATEGIC OBSERVATION

Your value model is 65% time-driven. This indicates significant documentation burden—providers are spending substantial time that could be redirected to patient care and capacity.

YOUR VALUE DRIVERS

How Time Becomes Value

7,000 hours returned to your providers. Here's how each driver works.

TIME RECAPTURED

Patient Access

\$364K

7,000 hrs × 13% toward capacity = 910 hrs

910 hrs × (60/30 min) = 1,820 visits

1,820 × \$200/visit = \$364K/year

TIME RECAPTURED Subtotal

\$364K

REVENUE OPTIMIZED

wRVU Improvement

\$195K

1.5 wRVU/enc × 5% lift × 105,000 encounters

× \$33/wRVU × 75% realization

= \$195K/year

REVENUE OPTIMIZED Subtotal

\$195K

PROJECTED ANNUAL VALUE

\$409K

Per provider: ~\$8K/year

THE INVESTMENT CASE

Infrastructure, Not Expense

Investment stays flat while value grows. This is the signature of infrastructure—fixed cost, scaling returns.

3-YEAR PROJECTION

PERIOD	VALUE	INVESTMENT	NET VALUE	CUMULATIVE
Year 1	\$409K	\$150K	\$259K	\$259K
Year 2	\$450K	\$150K	\$300K	\$559K
Year 3	\$495K	\$150K	\$345K	\$903K

By Year 3, you're generating 3.3× for every \$1 invested. That's not a line item to cut in a downturn—it's infrastructure to protect.

AT SCALE

Per-provider economics remain consistent at scale.

CURRENT MODEL

\$409K/yr

50 providers
70% utilization
Per provider: ~\$8K/yr

AT FULL SCALE

\$4.7M/yr

500 providers
80% utilization
Per provider: ~\$9K/yr

KEY METRICS TO TRACK

- 1. Documentation time per encounter (target: -50%)
- 2. Provider satisfaction score (target: +15 pts)
- 3. wRVU per encounter trend (target: +2-5%)

YOUR ASSESSMENT

50 providers.

150,000 encounters.

\$409K projected net value.

\$8K per provider per year.

Give providers their time back—and the documentation gets better, not worse. That's the counterintuitive truth about ambient documentation. Better notes come from less time documenting.

AT A GLANCE

VALUE SUMMARY

TIME RECAPTURED	\$364K
Patient Access	\$364K
REVENUE OPTIMIZED	\$195K
wRVU Improvement	\$195K

Net Annual Value **\$409K**

INVESTMENT SUMMARY

Annual Investment	\$150K
Per provider	\$3K
Year 1 ROI	3.7×
Year 3 Cumulative	\$903K

UTILIZATION

Projected	70%
Hours Returned	7,000
Per provider/week	2.7 hrs

METHODOLOGY

YOUR INPUTS

50 providers
150,000 encounters
70% utilization
4 min saved
\$150K investment
7,000 hrs returned

REALIZATION RATES

wRVU Improvement: 75%
Conservative by design.
Based on observed
implementations.

This assessment is for planning purposes. Realization rates are conservative and based on observed implementations. The goal is a framework for decisions, not a prediction. Validate with your organization's data post-implementation.
