

Mayo Clinic

Your scribe program represents a strategic investment in documentation support. Here's what we learned about where it stands today—and what comes next.

YOUR PROGRAM TODAY

The Investment That Got You Here

You've built a scribe program that supports 15 providers. That matters.

THE CHALLENGE

What Scaling Looks Like

Right now, **185 providers** (92% of your organization) document without support. That's **74,000 hours** of documentation time annually.

Scribe programs scale linearly. To cover every provider, your investment would grow from **\$500K** to **\$6.7M**—a **13× increase**.

And that's before hidden costs. When you factor in **~40% annual turnover** and **management overhead**, your true program cost is closer to **\$595K/year**.

The bottom line: your scribe program works—but it can only grow one way: linearly.

"Scribes bring real value—they're human, they build relationships with providers, they learn institutional nuances. This isn't about replacing what works. It's about asking whether there's a better path to scale."

What If There's Another Way?

Scribes may serve strategic or academic purposes at your organization. But there's also an opportunity to scale documentation support differently.

THE MATH YOU'RE FACING

Three Numbers Worth Knowing

These are the numbers that tell the story of where your program stands—and what it would take to go further.

Providers without documentation support today	185 of 200
Additional investment needed for full scribe coverage	+\$6.2M/year
Hidden costs adding to your current program	+\$95K (19%)

There's Another Way

AI-powered ambient documentation can support every provider—without the linear cost curve.
No turnover. No training gaps. No coverage limits.

Imagine giving all 200 providers documentation support tomorrow—without hiring a single additional scribe.

METHODOLOGY

Based on 10 scribes at \$25/hr × 40 hrs/week, covering 15 of 200 providers. Hidden costs assume ~40% annual turnover at \$5K/scribe training and ~15% management overhead. Scaling assumes consistent scribe-to-provider ratio of 1:1.5.
