

UNDERSTANDING VALUE REALIZATION

Ambient AI creates value through four dimensions: how many encounters use it (utilization), how much time it saves (efficiency), how it improves documentation quality (wRVU lift), and whether providers will keep using it (satisfaction).

Most organizations capture only 30-60% of the potential value. The gap isn't because ambient AI doesn't work — it's because value realization requires optimization across all four dimensions. Small gaps in each area compound into significant unrealized value.

YOUR RESULTS AT A GLANCE

OUR FINDINGS

At 62% value realization, your organization is performing above average. You're capturing meaningful value from ambient AI, but there's still a gap of \$72K annually that represents optimization opportunity.

Primary Opportunity

Your data shows Satisfaction as your biggest gap (24% of benchmark), while Utilization is your relative strength (87%). This suggests targeted intervention on Satisfaction could yield disproportionate returns without disrupting what's already working.

What's at Stake

The risk at this stage is complacency. "Good enough" can become the enemy of excellent. Organizations that push from Optimized to Transformed often see the highest ROI on their optimization efforts because the foundation is already strong.

Dimension-Specific Observations

Satisfaction:
At 24% of benchmark, provider satisfaction is a concern. Dissatisfied providers use solutions less over time. Understanding WHY satisfaction is low is critical before it affects utilization.

THE VALUE REALIZATION SPECTRUM

Organizations move through four stages as they optimize ambient AI:

YOUR PERFORMANCE ACROSS FOUR DIMENSIONS

Value realization depends on performance in four areas. Here's where you stand compared to Abridge benchmarks:

UTILIZATION

87% of benchmark

What it measures: The percentage of patient encounters where ambient AI is actually used to generate documentation.

You: 65%

Benchmark: 75%

Why it matters: Every encounter not using ambient AI is an encounter where providers still carry the full documentation burden. Low utilization means you're paying for a solution that isn't being used consistently.

What drives it: Workflow integration, provider habits, technical friction (login issues, connectivity), specialty fit, and whether using the tool feels natural in the clinical environment.

EFFICIENCY

75% of benchmark

What it measures: The average time saved per encounter when ambient AI is used — typically measured as reduction in documentation time.

You: 3 min

Benchmark: 4 min

Why it matters: This is the core promise of ambient AI: giving time back to providers. Less time saved per encounter means the documentation burden persists, even when the tool is being used.

What drives it: Note quality out of the box, how much providers edit generated notes, specialty-specific templates, EHR integration smoothness, and whether the AI captures the encounter accurately the first time.

QUALITY (wRVU LIFT)**60% of benchmark**

What it measures: The improvement in documentation completeness and coding accuracy, measured through wRVU capture — a proxy for whether documentation supports appropriate reimbursement.

You: +3%**Benchmark: +5%**

Why it matters: Better documentation leads to better coding, which leads to better reimbursement. This is often the largest dollar opportunity in ambient AI — small improvements in coding accuracy compound across thousands of encounters.

What drives it: How completely the AI captures clinical details, whether it prompts for missing elements, coder feedback loops, and whether documentation supports the complexity of care actually delivered.

SATISFACTION**24% of benchmark**

What it measures: Provider satisfaction with the ambient AI solution — typically measured through surveys asking whether they would recommend it to colleagues.

You: 20%**Benchmark: 85%**

Why it matters: Satisfaction is a leading indicator. Dissatisfied providers use solutions less over time, creating a downward spiral. Happy providers become champions who drive adoption among peers.

What drives it: Accuracy of generated notes, time actually saved, reliability, ease of use, and whether it makes their day genuinely better vs. adding another thing to manage.

Your situation: At 24% of benchmark, satisfaction is a concern. Understanding WHY providers are dissatisfied is critical — is it accuracy? Reliability? Workflow friction? Low satisfaction often predicts declining utilization.

Your average score: $(87\% + 75\% + 60\% + 24\%) \div 4 = 62\%$

WHY GAPS COMPOUND

The four dimensions don't add — they multiply. A 60% score in one dimension limits the value you can capture from improvements in others. This is why small gaps across multiple dimensions create large overall gaps.

THE COST OF THE GAP OVER TIME

If the gap persists, unrealized value accumulates:

TODAY**\$0**

Starting point

YEAR 1**\$72K****YEAR 2****\$143K****YEAR 3****\$215K**

Cumulative

Every month at current performance = \$6K in unrealized value

HOW EACH GAP IS CALCULATED

Every number in this assessment can be traced back to your inputs and transparent assumptions. Here's the math:

UTILIZATION GAP		\$12K
Your utilization: 65%	Benchmark: 75%	Gap: 10pp
Step 1: Encounters at benchmark: 80,000 × 75% = 60,000		
Step 2: Encounters at your rate: 80,000 × 65% = 52,000		
Step 3: Gap × time savings: 8,000 enc × 4 min = 533 hours		
Step 4: Dollar value: 533 hrs × \$150/hr × 15% = \$12K		
EFFICIENCY GAP		\$30K
Your efficiency: 3 min	Benchmark: 4 min	Gap: 1 min
Step 1: Additional hours possible: 60,000 enc × 1 min ÷ 60 = 1,000 hours		
Step 2: Dollar value: 1,000 hrs × \$150/hr × 20% = \$30K		
QUALITY GAP (WRVU)		\$30K
Your wRVU lift: +3%	Benchmark: +5%	Gap: 2%
Step 1: Additional wRVU: 60,000 enc × 1.5 avg wRVU × 2% = 1,800 wRVU		
Step 2: Dollar value: 1,800 wRVU × \$33/wRVU × 50% = \$30K		
TOTAL ANNUAL GAP		\$72K
Utilization (\$12K) + Efficiency (\$30K) + Quality (\$30K)		

KEY TAKEAWAYS

- You're capturing 62% of ambient AI's potential value
- The largest opportunity is in Quality (60% of benchmark)
- Closing the gap could recover \$72K annually / \$215K over 3 years
- All calculations use conservative assumptions — actual value may be higher

METHODOLOGY & ASSUMPTIONS

YOUR INPUTS

- 60 providers
- 80,000 annual encounters
- 65% utilization
- 3 min time savings
- +3% wRVU lift
- 20% satisfaction

ABRIDGE BENCHMARKS

- 75% utilization
- 4 min saved per encounter
- +5% wRVU lift
- 85% satisfaction

VALUATION ASSUMPTIONS

- Provider time: \$150/hr
- Utilization conversion: 15%
- Efficiency conversion: 20%
- wRVU: \$33 (Medicare CF)

Benchmarks based on aggregate data from 200+ health system partners. Individual results vary based on specialty mix and operational factors.
