

DOCUMENTATION INTELLIGENCE ASSESSMENT

Your Organization

A structured analysis of the enterprise value flowing through your documentation infrastructure — where it is being captured, where it is leaking, and what closing the gap is worth.

PREPARED BY

Abride Partner Success · February 19, 2026

YOUR SCORE

Industry average	34 / 100
Top-quartile	71 / 100
Your organization	58 / 100

Above the industry average. The remaining gap is concentrated in specific domains.

UNREALIZED ENTERPRISE VALUE

YOUR INPUTS

Providers	50
Annual encounters	100,000
Utilization rate	40%
Time saved / encounter	2.5 min
Hours reclaimed	4,167 hrs
FTE equivalent	2.0

Already in your operations. Already earned. Not yet realized.

THE FOUR DOMAINS

Where Enterprise Value Lives

Each domain reflects your self-reported activation level and the enterprise value currently uncaptured. Domain weights: Capacity 30% · Revenue 25% · Workforce 25% · Risk 20%.

CAPACITY

What happened to the time ambient AI returned?

Activation: Not yet captured · Score: 15/100

\$56K

annual gap

15%

Recovered time that becomes additional patient slots, reduced overtime, or operational efficiency. At your scale, undeployed capacity represents clinical supply currently evaporating.

Panel utilization rate

Overtime / locum dependency

Patient access wait times

Slot fill rate

REVENUE

What is documentation fidelity worth to your revenue cycle?

Activation: Some improvement · Score: 30/100

\$63K

annual gap

30%

Coding accuracy, HCC capture, and denial prevention driven by complete clinical notes. Every encounter either captures or leaks value through your documentation infrastructure.

E/M level distribution

HCC recapture rate

Denial rate by category

Payer mix optimization

WORKFORCE

What is documentation burden costing your workforce?

Activation: Scores improved · Score: 40/100

\$240K

annual gap

40%

After-hours charting is the leading predictor of burnout, and burnout drives turnover. At \$500K–\$1M per physician replacement, this is an existential budget line item.

After-hours documentation time

Provider satisfaction scores

Turnover rate by tenure

Burnout survey results

RISK

Is your documentation ready for what comes next?

Activation: Future ready · Score: 90/100

\$120K

annual gap

90%

Audit defensibility, quality reporting, and readiness for clinical AI. Every AI initiative your organization plans requires a structured documentation foundation.

Audit readiness score

Note completeness rate

Structured data usability

Quality reporting accuracy

COST OF INACTION

Every Month at Current Activation Levels

This is not aspirational revenue. It is value already flowing through your documentation infrastructure that is not being systematically realized.

MONTHLY VALUE UNCAPTURED

\$40K

\$10K per provider · \$5 per encounter

DAILY VALUE UNCAPTURED

\$1K

Every business day your organization does not systematically capture this value.

THREE-YEAR PROJECTION

SCENARIO	3-YEAR VALUE	PERMANENTLY LOST
Act now	\$1.7M	—
Wait 6 months	\$1.5M	\$201K
Wait 12 months	\$1.2M	\$455K

Delay doesn't pause the loss. Every month at current activation permanently forfeits \$40K in enterprise value that cannot be retroactively recovered.

WHAT THIS MEANS

Your organization has 50 providers generating 100,000 encounters annually. At 40% utilization and 2.5 minutes saved per encounter, the documentation infrastructure is returning value — but not at the rate the underlying data supports. The gap between current performance and systematic enterprise capture is \$479K annually.

TRANSPARENCY

How We Calculate This

Every number in this assessment is derived from your inputs, applied against Abridge deployment benchmarks and published healthcare data. We apply a conservative haircut to all estimates.

KEY ASSUMPTIONS

ASSUMPTION	YOUR VALUE	INDUSTRY RANGE
Providers on ambient AI	50	Varies by org
Annual encounters	100,000	Varies by org
Utilization rate	40%	30–75%
Time saved per encounter	2.5 min	2–6 minutes
Abridge utilization benchmark	76%	Production data
Abridge time benchmark	4.0 min	Production data
Conservative realization haircut	40%	Standard

We would rather show a smaller number you can defend than a larger number that falls apart under scrutiny. All gap values reflect a 40% conservative haircut applied after calculation.

NEXT STEPS

Validate Your Inputs

Replace self-reported estimates with actual data: EHR timestamps for documentation time, payroll records for overtime, claims data for E/M distributions.

Timeline: 1–2 weeks

Request a Working Session

A 30-minute session to walk through your domain scores, identify your highest-leverage opportunity (- Workforce: \$240K), and build a measurement plan for the first 90 days.

Strategic planning, not a demo

This assessment is for strategic planning purposes. All calculations are based on self-reported inputs and Abridge deployment benchmarks. The models are directional — the real answers come from your data.
